0.7 Distribution Dispatch Problem

This is from Josh Day's talk: <https://www.youtube.com/watch?v=EwcTNzpQ6Sc>

Solution is from: https://github.com/joshday/Talks/blob/master/SLG2016_IntroToJulia/Slides.ipynb

```

In [ ]: function myquantile(d::UnivariateDistribution, q::Number)
    θ = mean(d)
    tol = Inf
    while tol > 1e-5
        θold = θ
        θ = θ - (cdf(d, θ) - q) / pdf(d, θ)
        tol = abs(θold - θ)
    end
    θ
end

for dist in [Gamma(5, 1), Normal(0, 1), Beta(2, 4)]
    @show myquantile(dist, .75)
    @show quantile(dist, .75)
    println()
end

```
